Project Title

Smart Transportation System

1. Project Overview

This project aims to develop comprehensive technical documentation for the “Smart Transportation System,” a digital platform designed to improve university transportation services for students, drivers, and administrators.

The system includes a mobile application for students and drivers, and a web-based dashboard for administrators. It provides features such as route selection, real-time bus tracking, schedule management, and user interaction.

The purpose of this project is not to build the system itself, but to create clear, structured, and user-centered documentation that explains how the system works and how different users interact with it.

2. Objectives

- To analyze different types of users and their needs.
- To create clear and structured technical documentation.
- To develop user manuals for different system users.
- To design system architecture and workflow diagrams.
- To improve usability by providing easy-to-understand documentation.

3. Target Audience

The documentation will be designed for the following users:

- Students: who use the app to track buses and view routes.
- Drivers: who manage trips and view assigned routes.
- Administrators: who manage the system through a web dashboard.

4. Scope of the Project

The project will include:

- User documentation (User Manuals)

- System overview and architecture documentation
- User flow diagrams and navigation structure
- Interface descriptions (UI explanations)
- Basic test cases and usage scenarios

The project will NOT include:

- Full system development
- Payment systems or external integrations

5. Methodology

The project will follow these steps:

1. Analyze users and their needs
2. Define documentation structure
3. Create user flows and diagrams
4. Write user manuals and system documentation
5. Review and improve documentation based on feedback

6. Tools and Technologies

- Microsoft Word / Google Docs (for documentation)
- Draw.io / Figma (for diagrams and UI design)

7. Conclusion

This project will provide a complete and user-friendly documentation set for the Smart Transportation System. It will help users understand the system easily and improve overall usability and interaction with the platform.
